Motivated Software Engineer and Data Science undergraduate with hands-on experience designing, developing, and debugging full-stack applications using Java, Python, JavaScript, and SQL. Skilled in object-oriented programming, algorithms, and database design. Experienced in building responsive front-end interfaces with React and maintaining scalable back-end services with Node.js. Passionate about software architecture, data-driven development, and continuous learning in cloud infrastructure, containerization, and AI-powered systems.

EDUCATION

University of South Florida – Expected Graduation: May 2026

- **Major:** Data Science & Analytics
- **GPA:** 3.8
- **Relevant Courses:** Algorithms & Data Structures, Object-Oriented Programming (Java I & II), Database Concepts (Proficiency in SQL), Python Programming, Software Development, Machine Learning, Operating Systems

WORK EXPERIENCE

Software Engineer – ZYSC LLC

Apr 2025 – Present

- Diagnosed and resolved critical performance bottleneck that plagued the application for months, implementing Gunicorn with multi-threaded workers to improve page load times by up to 75%
- Designed and developed a full-stack web application using React, TypeScript, Node.js, and SQL, from inception through deployment.
- Implemented RESTful APIs, integrated front-end and back-end services, and optimized database queries for performance.
- Built modular components and applied object-oriented design patterns to enhance scalability and maintainability.
- Collaborated with cross-functional teams to debug production issues, improve user experience, and ensure code quality via version control and CI/CD workflows.
- Assisted in automating deployment pipelines using Docker and Jenkins, aligning with microservices and containerization practices..

Web Developer Intern – USF Global Tech Experience

Jan 2024 – May 2024

- Built responsive websites and UI components using HTML, CSS, JavaScript, Bootstrap, and Tailwind CSS..
- Partnered with designers and developers in an agile, sprint-based workflow, applying Git for version control and collaborative feature tracking.
- Implemented accessibility and performance optimizations that reduced average load times by 30 percent across projects.

Security Officer – Tampa General Hospital

Oct 2024 – Apr 2025

- Maintained operational awareness and rapid problem-solving in high-pressure environments, reinforcing reliability and accountability in team-based settings.

Bouncer / Armed Security Officer – Gulf Coast Security Services

Sep 2022 – Jul 2024

- Redesigned and maintained the company website to improve responsiveness and navigation, demonstrating initiative and technical adaptability.

Head Lifeguard & Water Safety Instructor – City of Clearwater

May 2018 – Aug 2023

- Trained and supervised lifeguards; reduced safety incidents by 25% through process improvements and data-driven feedback.

SKILLS

JavaScript (ES6+), TypeScript, React, Redux, SQL, GraphQL, Node.js, Express, HTML5, CSS3, Bootstrap, Tailwind CSS, Git, GitHub, Jira, Docker, Figma, REST APIs, Single-Page Applications (SPAs), Microservices Architecture, Frontend Performance Optimization, Responsive Web Design, UI/UX Collaboration, Agile Development, Debugging, Testing (Jest), Version Control, Continuous Integration (CI/CD), Component Libraries, Web Accessibility, Cross-Functional Communication, Software Documentation,
